                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a novel human cell surface receptor protein CC (HCSRP) designated HCSRP-8. The nucleotide sequence was identified in CC Incyte Clone 312256 from the cDNA library LUNGNOTO2, which was made from CC RNA isolated from lung tissue. A number of Incyte Clones were used to assemble the consensus sequence. BLAST analysis showed that the sequence is homologous to immuno-superfamily protein B12 93779242. HCSRP and its catagonist are useful for preventing or treating disorders associated with decreased or increased expression or activity of HCSRP. Such CC disorders such as returned at the sequence cdisorders such as returned at the sequence cdisorders such as returned at the sequence consisted at the sequence consisted at the sequence consisted at the sequence sequence sequence sequence sequence sequence sequence consisted at the sequence of the sequence of the sequence of the sequence sequence sequence sequence sequence sequence consisted as leukaemia and melanoma, immune consisted as the sequence sequence sequence sequence sequence sequence sequence conditions. Anti-HCSRP antibodies may be used as conditions and targeting or delivery mechanism for bringing constant sequence sequence sequence conditions are useful for drug screening using libraries of communogenic fragments are useful for drug screening using libraries of communogenic fragments are useful for drug screening using libraries of

Human lymphoid derived dendritic cell adhésion molecule.

31-MAY-2000

(first entry)

```
The present amino acid sequence is the human lymphoid derived dendrtitic cells adhesion molecule, LDCAM. It is found on lymphoid derived dendrtitic cells and displays homology to adhesion molecules, B7-1 and cytoplasmic region of B7-11. Human LDCAM is expressed in breast, retina, foetal liver, spleen and heart, lung, muscle, placenta, thyroid and lung carcinoma. LDCAM polypeptides interacts with T cell surface molecules to alter signalling and inhibits T cell proliferation, bind to themselves and B71-1, an LDCAM binding protein and increases natural killer (NK) cell populations. It may be used to measure the biological activity and as quality control reagents of LDCAM binding proteins. LDCAM may be used for treating disorders associated with malfunctioning of immune system, inflammation, autoimmune disorders, viral infected cells, infectious diseases and for killing tumour cells. They are also useful for prevention or reducing the effect of organ and bone marrow transplant rejection and for modulating T cells immune responses. LDCAM polypeptides may also be used as carriers for delivering agents attached to T cells or cells bearing B7L-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               biological activity; quality control reagent; treatment; inflammation; immune system disorder; autoimmune; viral infection; infectious disease; organ transplant rejection; bone marrow; modulator; immune response.

The method comprising contacting a cell component of a proliferating cell with a reagent that detects level of the cell component in the proliferating cell and determining modification in the level of the cell component in proliferating cell as compared with a healthy cell, where modification indicates disorder associated with a feel liver, lung or pancreatic cancer) associated with tumour suppressor lung cancer (TSLC1) in a subject. The invention is useful in gene therapy and for treating a cell proliferative disorder such as lung cancer (human non-small cell lung cancer), liver cancer (hepatocellular carcinoma) or pancreatic cancer associated with modification of TSLC1 production, where a reagent which modulates (preferably, increases) TSLC1 level in the cells, is employed. The present sequence is human TSLC1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP6289-ABP63053) or an antibody (III) to (II), (II) and (III) are useful for diagnostic evaluation of disorders. (I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention relates to an isolated nucleic molecule that is at least CC 95% identical to 18 human cDNA sequences representing 12 novel genes CC encoding secreted proteins or a polynucleotide fragment of the cDNA Sequence contained in American Type Culture Collection (ATCC) deposit No. CC defined in the specification, its species homologue, a variant or allelic variant of the polynucleotide having a polynucleotide capable of CC hybridising under conditions the polynucleotide, where the polynucleotide does not hybridise under stringent conditions to a nucleic acid molecule CC having a nucleotide sequence of only A or T residues. Also included are recombinant vectors, host cells (for producing the polypeptide), the CC secreted polypeptide (comprising a sequence that is at least 95% CC identical to a polypeptide fragment, domain, epitope, full-length CC protein, variant, allalic variant or species homologue), antibodies that specifically bind to the polypeptides, diagnosing, treating, preventing or ameliorating a medical condition by administering the polypucleotide (or the polypeptide, the gene corresponding to the cDNA sequence and conditions to a nactivity in a biological assay (by expressing an activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-APR-2000;

The polypeptides, nucleic acids and antibodies are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation and other immune disorders, neurological and blood clotting disorders (many examples are given in the specification). The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunohistochemistry assays. The polypeptide, polynucleotide, agonist or antagonist may also be used as a food additive or preservative to increase or decrease storage capabilities, fat content or other nutritional components. The present is a secreted protein of the

Comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially cexpressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity in an animal of one or more small molecule that regulates the activity in an animal of one or more of the polypeptides given in the composition and a pharmaceutical composition comprising the one or more of polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more of injury (CCI) and spared nerve injury (Chung), chronic constriction conjury (CCI) and spared nerve injury (SNII) in an animal (e.g. gene conjurce data for this patent did not form part of the printed conformation, but was obtained in electronic form directly from WIPO at the specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more or human polynucleotides or a polynucleotide which represents derivative or allelic variation of the nucleic acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New composition comprising preparing a medicament for

                                                   ention relates to an isolated nucleic acid sequence, or its variant, a fragment of the cDNA sequence, or its fragment, epitope or species homologue. The nucleic acid is useful for new a medicament for preventing, treating or ameliorating a medical on e.g., cancer, liver disorders such as hepatitis or neural rs such as Alzheimer's disease. The present sequence represents no acid sequence of a novel human secreted protein associated

CC The invention relates to identifying (MI) a candidate p53 pathway CC modulating agent, by contacting an assay system comprising a purified HM CC polypeptide (human orthologue of genes that modify the p53 pathway in CC Drosophila) or nucleic acid with a test agent under conditions, where but CC contacting or nucleic acid with a test agent under conditions, where but CC contacting a cell defecting a test agent biased activity of the assay system. CC Also included are modulating (M2) a p53 pathway of a cell (comprising contacting a cell defective in p53 function with a candidate modulator CC that specifically binds on HM polypeptide comprising an HM maino acid CC sequence, where p53 function is restored), modulating (M3) a p53 pathway CC in a mammalian cell (comprising contacting the cell with an agent that Specifically binds an HM polypeptide or nucleic acid) and diagnosing (M4) CC adisease in a patient (comprising contacting the sample with a probe for HM comparing the results with a control, and (d) determining CC expression; (d) comparing the results with a control, and (d) determining contacting the p53 pathway. A probe for HM expression cis useful for diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 * expression level. CC modulations where disease or disorder prognosis is related to defects in the p53 pathway, such as angiogenesis, apoptotic or cell proliferation of the cell, so that the cell undergoes normal couseful for modulating the p53 pathway of a cell, thus restoring consecuted a lower of the cell, thus restoring the p53 pathway of a cell, thus restoring the p53 pathway of a cell, thus restoring consecutes a lower of the cell undergoes normal consecutes a lower of the cell undergoes normal consecutes a lower of the cell proliferation disorders. The present sequence consecuted the p53 pathway and a cell to contact sequence consecuted the p53 pathway and cell to cell the cell contact sequence cell contact sequence cell contact sequence cell

X CC The invention relates to identifying (M1) a candidate p53 pathway CC modulating agent, by contacting an assay system comprising a purified HM CC polypeptide (human orthologue of genes that modify the p53 pathway in CC posophila) or nucleic acid with a test agent under conditions, where but for the presence of the test agent, the system provides a reference cartivity, and detecting a test agent under conditions, where but for the presence of the test agent, the system provides a reference activity, and detecting a test agent with a candidate modulator CC in a contacting a cell defective in p53 function with a candidate modulator that specifically binds to a HM polypeptide comprising an HM amino acid CC in a mammalian cell (comprising contacting the cell with an agent that compectively) binds an HM polypeptide or nucleic acid) and diagnosing (M4) candidate modulator; (c) comparising contacting the control; and (d) determining CC expression; (c) comparing the results with a control; and (d) determining CC expression; (c) comparing the results with a control; and (d) determining considered the comparison indicates a likelihood disease). (M1) is useful considered to diagnosing breast, colon, kidney, lung and ovarian cancer, in a patient, where the cancer has greater than 25 * expression level conditations, where disease or discorder prognosis is related to defects in the p53 pathway, such as, angiogenesis, apoptotic or cell proliferation of the cell, so that the cell undergoes normal consideration or progression through the cell undergoes normal consideration or cell proliferation discorders. The present sequence consideration or cell proliferation discorders. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragme derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence
                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; Page; 1017pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-268312/26.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses

which are designated as PRO polypeptides are described The membrane-bo proteins have various industrial applications, including as pharmaceutical and diagnostic agants. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources

Novel nucleic acids encoding PRO polypeptides, used presence of tumors, such as prostate and breast tumoscreen for modulators of the compounds. tumors, ő diagnose the and ď

Claim 11; Fig 34; 774pp; English.

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.

CC The PRO polypeptides and their associated nucleic acids can be used to compete the presence of a tumour in a mammal by comparing the level of capression of a PRO polypeptide in a test sample of cells from the animal cexpression of a PRO polypeptide in a test sample of cells from the animal capression in the test sample includes the presence of a tumour in the capression of the test sample includes the presence of a tumour in the capression in the test sample includes the presence of a tumour in the capression of the presence of a tumour in the capression of the presence of a tumour in the capression of rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNP) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO contacted contacted with it. A specific polypeptide can be used to stimulate the prosence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, the proliferate, rectal, cervical, or liver tumours, in mammalian color, can be used for genetic analysis of individuals with genetic disorders and be used for genetic analysis of individuals with genetic disorders.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score
